Lyon, B

Lyon, Becky: National Library of Medicine, Library Operations, 8600 Rockville Pike, Bethesda, MD 20894, USA, blyon@nlm.nih.gov

The National Library of Medicine continues to evolve from an institution serving primarily health professionals to a source of authoritative health information for all. The largest medical library in the world, NLM is continually expanding its services via the internet and is reaching all corners of the globe. The Library continues to collect, process, index, preserve, and share the world's biomedical literature. New technologies have altered how these traditional activities are done and have expanded their potential for improving public health.
