

Database of Kaunas University of Medicine Scientific Publications': 3 in 1

Meile Kretaviciene
Director of Library, meile@kmu.lt

EAHIL workshop 2005, Palermo, June 23-25

History

- Goal in 1983: to collect University publications, published in national and international periodicals for local history
- Soon University authorities realized that accurately collected data could be used for formal university reports and statistics
- Local software and enormous machines
- Local software running on DOS platform, PC (1992)

Today

- PDB includes over 63 thousand records since 1950
- covers completely all university scientific publications
- More than 2000 new records are added every year
- runs on *Aleph 500* Library system as a separate Library (02) (E.catalog – 01)

Submission of publications to DB

University regulation:

- University Research Dpt. would not accept formal information on scientific publications unless data has been included into the Publications DB.
- Researchers must submit to the Library copy of their article, send link or record within 5 days after it has been published.
- All formal scientific reports and documents where publication lists are included have to be countersigned by responsible librarian.

Result: the regulation obliges authors to present their publications to the Library. Otherwise, their articles will be not included to the DB and scored up as research work.

Publications DB: 3 in 1

Users can use the University published scientific works DB in 3 ways:

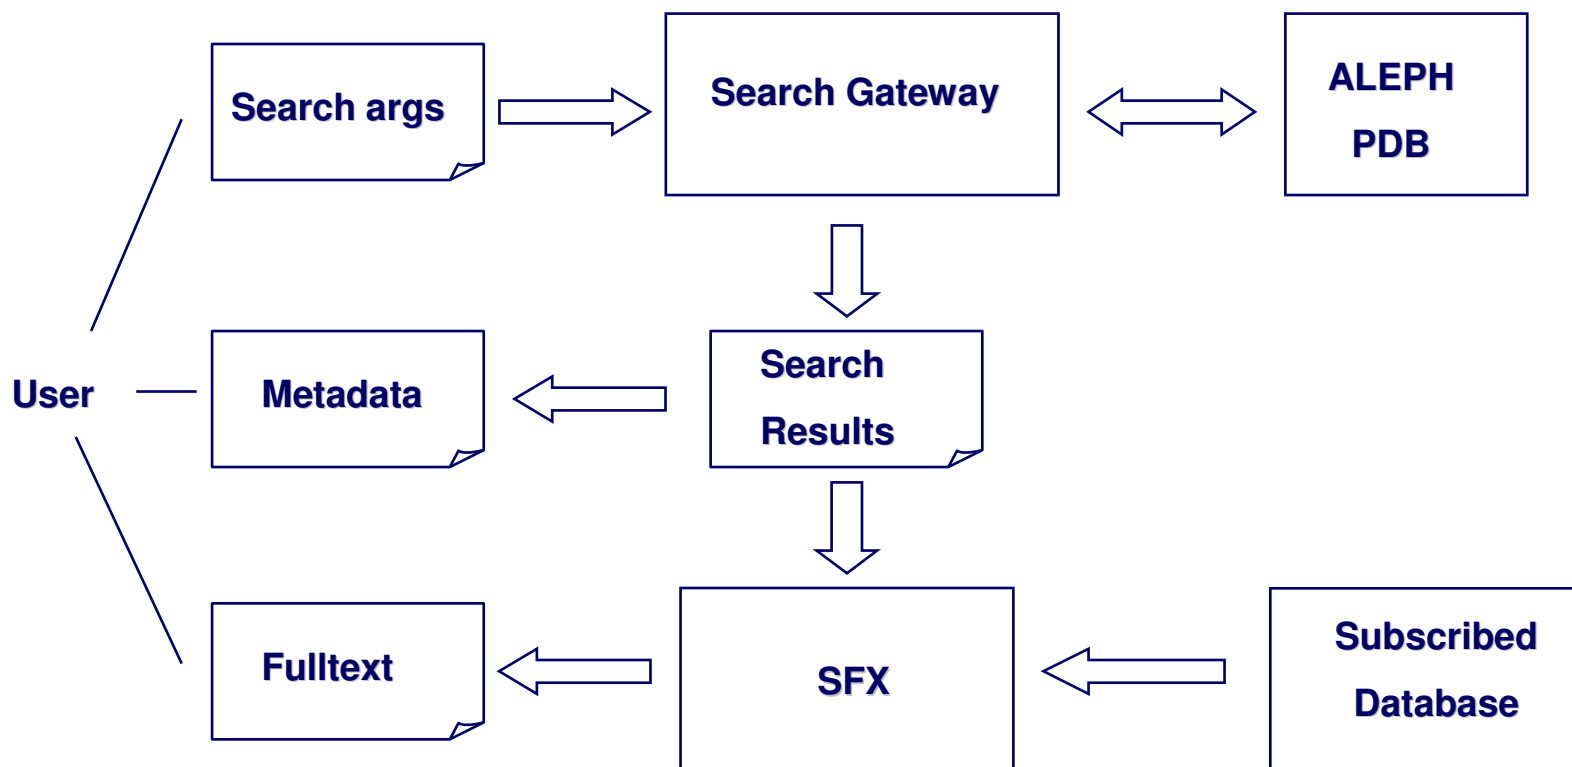

- as a library DB
- as a statistical DB for University and Ministry of Education needs
- as a personal DB for scientists

3 in 1

Library database

- LIS *Aleph500* is a perfect software solution for libraries and information centers and it ensures good cataloguing, search facilities, user-friendly interface
- SFX delivers powerful linking services in the scholarly information environment and full text documents
- *MetaLib*® (library portal from Ex Libris) that enables users to access their institution's e-collections, obtain relevant services, and work in a personalized environment
- These 3 *ExLibris* software products enable to create National DB for health and medicine.

itle: A 1 year follow-up study of the consequences of Helicobacter pylori eradication in duodenal ulcer patients: unchanged frequency of erosive oesophagitis and decreased prevalence of non-erosive gastro-oesophageal reflux disease/ Limas Kupcinskas, Laimas Jonaitis, Gediminas Kiudelis

ear: 2004

bstract: Background and aim: Discussions concerning the increased incidence of gastro-oesophageal reflux disease (GORD) after Helicobacter pylori eradication continue. In this study we aimed to evaluate the presence of co-existing GORD in (1) duodenal ulcer patients after successful H. pylori eradication, (2) patients with persistent H. pylori infection after attempts at eradication, and (3) controls in whom H. pylori eradication had not been attempted. Methods: A prospective study of 255 patients with duodenal ulcer who were assigned to H. pylori eradication or to control treatment (omeprazole for 4 weeks) and followed up for 1 year or until peptic ulcer relapse. GORD was determined in the patients who had reflux oesophagitis on endoscopy at the beginning of the study and/or in patients without reflux oesophagitis if they experienced heartburn and/or regurgitation at least twice a week associated with impairment of daily activities. Results: The study revealed a significant decrease (from 44.6% to 21.7%; P <0.001) of patients with GORD at the end of the follow-up among those in whom H. pylori eradication had been successful. There was no significant difference in the frequency of reflux oesophagitis before and after the follow-up regardless of H. pylori status. Conclusions: H. pylori eradication did not significantly influence the prevalence and incidence of reflux oesophagitis in patients with duodenal ulcer during a 1 year follow-up period, but there was a significantly lower prevalence of GORD after successful H. pylori eradication, as patients with non-erosive GORD had been...

3 in 1: Statistical database.

- the main user of *PDB* statistical information is Department of Science and Study at the Ministry of Education. Scope of interest: statistical information
- financing of Universities strongly depends on statistical indicators of scientific publications
- Task from Ministry: develop a system enabling to get them information for statistical reports directly from the *PDB*

Decision

- merge University administrative DB and Library DB of Publications, the data from which is automatically imported into LieMSIS PDB
- the system is based on the LIS Aleph bibliographical and University information system administrative records

PDB structure

Result (1)

- Statistical information can be used for:
 - various kinds of reports
 - evaluation of scientific activities at faculties and departments
 - formatting Doctorate Committees
 - evaluating scientists' impact factor, etc.
 - Generation publications lists
- Each hierarchic structure (faculty, chair, laboratory, center) has access to appropriate level of their data

Results (2)

- Statistical reports can be performed according to:

Type of publication, science branch, 3 levels of hierarchic structure (faculty, chair, laboratory), data.

- Each statistical table contains number of publications, authors, contribution and impact factor.
- Publications' lists can be performed according to:

Authors (2 Types), publications types, 3 levels of hierarchic structure, science branch.

Statistics

- **Publications. I level department.** Name and code of the department, number of publications, impact factor

Ataskaitos data: 20030217; Leidimo metai: 2002-2003; I lygio padalinys:0108 Endokrinologijos institutas; Indėlis nuo visų autorių;

Kodas	Pavadinimas	Kiek	Indėlis
0108	Endokrinologijos institutas	102	42.74
Iš viso publikacijų:			42.74

- **Personal statistics according to type of publications.** Type of publications, title and number of publications

Ataskaitos data: 20020325; Leidimo metai: 2001-2002; Autorius: 35501010030 - KIELA Jonas - 19550101; Publikacijos (statiškai) pagal spaudinių rūšis

Kodas	Pavadinimas	Kiekis
S1a	Straipsniai užsienio mokslo žurnaluose su svorio koeficientu	1
P2lt	Pranešimai konferencijų, vykusių Lietuvoje, pranešimų medžiagoje	1
Iš viso publikacijų:		2

Lists of publications.

Ataskaitos data: 20020326; Leidimo metai: 1999-2002; Autorius: 35501010030 - KIELA Jonas - 19550101;
Publikacijų sąrašas (pažymėti institucijos autoriai)

1. Kondovas, Algis; Kiela, Jonas; Žėbius, Alfonsas

Automatizuotas kirpinių tiekimo įrenginys // Mechanika - 99 : tarptautinės konferencijos pranešimų medžiaga, Kaunas, 1999 m. balandžio 8-9 d.. p. 175-183.

2. Kondovas, Algis; Kiela, Jonas; Žėbius, Alfonsas

Control strategy of the automatic supply device of the cutted textile pieces // The Textiles : Research in Design and Technology / Kaunas University of Technology. Kaunas : Technologija, 2000. ISBN 9986-13-824-8. p. 232-238.

I level dpt. (faculty) List of publications ranked by type of publication and science branches. Faculty's authors are underlined.

Ataskaitos data: 20020326; Leidimo metai: 1999-2002; Autorius: 35501010030 - KIELA Jonas - 19550101;
Publikacijų sąrašas (sugrupuotas, pažymėti institucijos autoriai)

Padalinys I: 01 - ELEKTROTECHNIKOS IR AUTOMATIKOS FAKULTETAS

Spaudinio rūšis: P1bt - Pranešimai referuotoje tarptautinės(ių) mokslo organizacijos(u) organizuotų konferencijų, vykusių Lietuvoje, pranešimų medžiagoje

Mokslo kryptis: 08 T - Medžiagų inžinerija

1. Kondovas, Algis; Kiela, Jonas; Žėbius, Alfonsas

Control strategy of the automatic supply device of the cutted textile pieces // The Textiles : Research in Design and Technology / Kaunas University of Technology. Kaunas : Technologija, 2000. ISBN 9986-13-824-8. p. 232-238.

Spaudinio rūšis: P2 - Pranešimai nerefekuotoje konferencijų pranešimų medžiagoje

Mokslo kryptis: 09 T - Mechanikos inžinerija

1. Kondovas, Algis; Kiela, Jonas; Žėbius, Alfonsas

Automatizuotas kirpinių tiekimo įrenginys // Mechanika - 99 : tarptautinės konferencijos pranešimų medžiaga, Kaunas, 1999 m. balandžio 8-9 d.. p. 175-183.

3 in 1: Personal database for scientists

- Scientists can create their statistical reports, create evaluation forms, scientist's impact factor
- print lists of publications for various academic purposes according to type of publication, data, ranking

Conclusions

- Development and administration of the University PDB extended the scope of the Library responsibility and added some extra work.
- At the same time it increased the role of the Library role and importance in the University activities. (no one can present formal scientific report or document for thesis defense without librarian signature, etc.)
- Integration of University PDB into the Lithuanian Virtual Library makes Lithuanian research more visible worldwide
