Targeted Users of AccessMedicine

- **Medical students:** with a variety of resources needed to excel in basic science studies and clerkships
- **Faculties:** with the curriculum tool to create, track, and report their students' progress. Instructors can create interactive learning modules pulling content from across all their Access subscriptions to meet the unique needs of their programs
- **Residents, Nurse Practitioners and Physician Assistants:** with instant access to videos, self-assessment, and leading medical textbooks that facilitate decision-making at the point-of-care
- **Practicing physicians:** to brush up on their medical knowledge to ensure the best patient outcome

AccessMedicine as an eLibrary

The screenshot displays the AccessMedicine website. At the top left is the 'ACCESS Medicine' logo, and at the top right is the 'McGraw-Hill Medical' logo. A navigation bar includes links for Home, Readings, Quick Reference, Drugs, Multimedia, Cases, Self-Assessment, Custom Curriculum, and Patient Ed. A search bar is present with a 'Search' button and an 'Advanced Search' link. The main content area features a large heading '123 Leading Medical Textbooks' and a grid of book covers, including 'Principles of Neurology', 'Basic Radiology', 'Lange', 'The Heart', and 'The Pharmacological Basis of Therapeutics'. A detailed view of a textbook page is overlaid, showing the title 'Zika Virus Infection' and a paragraph of text. The text describes the clinical presentation of Zika virus infection, including fever, headaches, malaise, maculopapular rash, conjunctivitis, myalgia, and arthralgia. It also notes that the infection was first documented in Africa in 1947 and has since been reported from Micronesia and Polynesia. The page also includes a section for 'ENCEPHALITIS' and a 'Clinical Access' banner at the bottom.

macules to papules that often vesiculate. The arthritis is multiarticular, migratory, and incapacitating, with resolution of the acute phase in a few days; the ankles, elbows, knees, phalangeal joints, wrists, and—to a much lesser extent—proximal and axial joints are involved. Persistence of joint pain and occasionally of arthritis is a major problem and may continue for months or even years despite lack of deformities.

Zika Virus Infection
 Zika virus is an emerging pathogen that is transmitted among nonhuman primates and humans by *Aedes* mosquitoes. Human infections are usually benign and are most likely misdiagnosed as dengue or influenza. Zika virus infection is characterized by influenza-like clinical signs, including fever, headaches, and malaise. A maculopapular rash, conjunctivitis, myalgia, and arthralgia usually accompany or follow those manifestations. Zika virus infection was first documented in Africa in 1947 and was later recognized in southeastern and southern Asia. In recent years, the number of Zika virus infections reported from Micronesia and Polynesia has increased steadily.

ENCEPHALITIS
 The major encephalitis viruses are found in the families Bunyaviridae, Flaviviridae, Rhabdoviridae, and Togaviridae. However, individual agents of other families, including Dhor virus and thogotovirus (Orthomyxoviridae) as well as Banna virus (Reoviridae), have been known to cause isolated cases of encephalitis as well. Arboviral encephalitides are seasonal diseases, commonly occurring in the warmer months. Their incidence varies

The screenshot displays the AccessMedicine website. At the top left is the 'ACCESS Medicine' logo, and at the top right is the 'McGraw-Hill Medical' logo. A navigation bar includes links for Home, Readings (highlighted), Quick Reference, Drugs, Multimedia, Cases, Self-Assessment, Custom Curriculum, and Patient Ed. A search bar is located below the navigation, with a 'Search' button and an 'Advanced Search' link. A dark overlay box contains the text: 'The 2 Minute Medicine™ Publishing Group is now available on AccessMedicine'. Below this, a '2m' logo is shown with the text 'curated medical news written by medical professionals'. The main content area features an article titled 'Increase in Guillain-Barré syndrome linked to Zika virus outbreak in French Polynesia' dated March 08, 2016, by Melissa Mccoy, Stefan Trela. The article text states: 'Originally published by 2 Minute Medicine® (view original article). Reused on AccessMedicine with permission.' It includes two numbered points: 1. 'This case-control study of a Zika virus outbreak in French Polynesia showed that an increased incidence of Guillain-Barré syndrome was associated with recent Zika virus infection.' 2. 'History of past dengue virus infection did not significantly differ between cases and control groups as analyzed via retrospective serum immunoassays.' Below the points is the 'Evidence Rating Level: 3 (Average)' and a 'Study Rundown:' section. The 'Study Rundown:' text reads: 'During an outbreak of Zika virus between October 2013 and April 2014 in French Polynesia, there was also an increase in the incidence of Guillain-Barré syndrome, an autoimmune'. On the left side of the article, there are book covers for 'HARRIS PRINCIPLES OF INTERNAL MEDICINE' and 'Principles of Neurology'. On the right side, there is a book cover for 'Coulam & Coulam's The Pharmacological Basis of THERAPEUTICS'. Navigation arrows are visible on the left and right sides of the article area.

AccessMedicine as an Educational Tool

The screenshot displays the AccessMedicine website interface. At the top left is the 'ACCESS Medicine' logo, and at the top right is the 'McGraw-Hill Medical' logo. A navigation bar includes links for Home, Readings, Quick Reference, Drugs, Multimedia, Cases, Self-Assessment (highlighted in blue), Custom Curriculum, and Patient Ed. Below the navigation bar is a search bar labeled 'Search AccessMedicine'. A row of five book covers is visible: 'CURRENT Medical Diagnosis & Treatment Flashcards', 'Pathophysiology of Disease Flashcards', 'DeGowin's DIAGNOSTIC EXAMINATION FLASHCARDS', 'Biochemistry and Genetics Flash Cards', and 'Microbiology & Infectious Diseases Flash Cards'. A large yellow-bordered box highlights a clinical vignette titled 'ALLERGIC RHINITIS'. The vignette describes a 40-year-old woman with a history of worsening nasal congestion and recurrent sinus infections, who had a 2-week vacation to Mexico where her symptoms temporarily resolved. The question asks for the major clinical manifestations of allergic rhinitis. To the right of the vignette, a 'Question 1 of 3' box shows the beginning of a multiple-choice question: '...st response to this question. ...llowing is a recommended therapy for ...s genital infection?'. Below the question, two options are partially visible: '...e virus vaccine' and '...e globulin'. The interface also features large, semi-transparent text overlays: 'Read' on the left, 'Apply' on the right, and 'Lea' at the bottom left. A copyright notice at the bottom of the yellow box reads: 'Copyright © McGraw-Hill Global Education Holdings, LLC. All rights reserved.'

A navigation bar includes links for Home, Readings, Quick Reference, Drugs, Multimedia, Cases, Self-Assessment, Custom Curriculum, and Patient Ed. A search bar is located below the navigation bar. The main content area features a 'Read' section with a 'Cases' dropdown menu. A 'Case Files for Students' window is open, showing a case study. The case study text reads: 'A 35-year-old female presents with a 1-hour history of chest pain, which resolved spontaneously radiating to both arms. The patient is a smoker but has no other risk factors (no family history of hyperlipidemia, etc.). The patient is diaphoretic and has a normal blood pressure. Physical examination reveals hyperinflation of the chest with hyperresonance to percussion and decreased tactile fremitus. Palpation of the anterior chest wall that reproduces the chest pressure. She is now otherwise normal. Cardiac enzymes, are normal.' Below the text is a multiple-choice question: 'Which of the following is true about this patient's physical findings and history?' with five options (A-E). A 'Show Answers' button is at the bottom of the question. On the left side, there are book covers for 'HARRISON'S PRINCIPLES OF INTERNAL MEDICINE' and 'The Pharmacological Basis of THERAPEUTICS'. On the right side, there is a 'Search' bar and an 'Advanced Search' button.

Case

A 35-year-old female presents with a 1-hour history of chest pain, which resolved spontaneously radiating to both arms. The patient is a smoker but has no other risk factors (no family history of hyperlipidemia, etc.). The patient is diaphoretic and has a normal blood pressure. Physical examination reveals hyperinflation of the chest with hyperresonance to percussion and decreased tactile fremitus. Palpation of the anterior chest wall that reproduces the chest pressure. She is now otherwise normal. Cardiac enzymes, are normal.

Which of the following is true about this patient's physical findings and history?

A) Pain radiating to both arms makes it unlikely that this patient's pain is cardiac.

B) The physical findings that are most highly associated with an acute myocardial infarction (a new S3 gallop).

C) The absence of risk factors makes it unlikely that this patient has cardiac disease.

D) The fact that the pain is reproducible on palpation of the chest wall effectively rules out cardiac disease.

E) Based on the information available, further cardiac evaluation is unnecessary.
